

Hospital Management Analysis PDF

Executive Summary	
This analysis was conducted to evaluate the hospital's operational efficiency and identify key areas for improvement. The data was first cleaned to ensure accuracy and consistency, including standardizing date, time, and numeric formats, removing duplicates, missing values, and irrelevant entries, correcting typos, and resolving inconsistencies in multi-value columns. Using pivot tables, I examined trends across appointments, billing, patients, insurance providers, and treatments. The findings highlight three critical areas for improvement: Appointment Management – Over half of all scheduled appointments result in cancellations or no-shows, indicating a need to streamline scheduling systems and communication processes. Billing and Payment Processing – With 68% of payments pending or failed, the hospital should review its payment infrastructure to identify and address inefficiencies. Provider Performance Metrics – Current data lacks insight into quality of care. Incorporating patient feedback and outcome-based measures can enhance evaluations of doctors, treatments, and insurance providers.

Recommendations

- Optimize Appointment Management:** Over 50% of scheduled appointments result in cancellations or no-shows. To reduce this rate, the hospital should evaluate and enhance appointment-related processes, including the member portal, administrative workflows, automated reminders, and online scheduling systems.
- Improve Billing and Payment Processes:** Analysis of billing data reveals that 68% of payments are either pending or have failed. A comprehensive review of the hospital's accounting and payment systems is recommended to identify and resolve inefficiencies or bottlenecks in the payment pipeline.
- Enhance Provider Performance Metrics:** Current data on doctors, treatments, and insurance providers primarily tracks operational metrics such as years of experience, provider-to-patient ratios, and service volume. Incorporating patient satisfaction surveys and outcome-based feedback will offer deeper insights into provider effectiveness and care quality.
